REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of record does not specifically disclose or remotely suggest, in combination with other features of the respective claims:

With regard to independent claim 1, caching a network connection comprising:

A method of migrating a communication socket operating in conjunction with an application, the method comprising:

migrating the first roam socket to a **third host device**; and
establishing communication between the third host device and the second host device with the first and second roam socket modules as a function of the association.

With regard to independent claim 12, a method of migrating a communication socket comprising:

migrating the application, the buffered input datastream and the migrateable socket to a third host device;

reestablishing the connection between the second host device and the third host device as a function of the migrateable socket.

With regard to independent claim 21, a method of migrating a communication socket of an application comprising:

Art Unit: 2141

migrating a first application, a first migrateable socket and a first association table from a first host device to a second host device;
sending a re-association message **from the second host device to a host device identified in the first association table** as a function of the first migrateable socket.

With regard to independent claim 29, a socket migration architecture for migrating a communication socket of an application comprising:

the **synchronization buffer and the migrateable socket** operable to **migrate from the first host device to a third host device**; and

the **migrateable socket** operable on the third host device to **reestablish the connection between the second and third host devices**.

With regard to independent claim 38, a socket migration architecture comprising:

the **migrateable socket and the association table migrateable** from the first host device to a second host device;

the migrateable socket operable in the second host device to send a re-association message with the communication protocol to **the at least one other host device** as a function of the identifying information.

2. A review of claims 1 - 43, in view of the Examiner's arguments above, indicates that claims 1 - 43 are allowable over the prior art of record.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
